

# RK Grinder Control Upgrade

## RK Centerless Grinding Machine Upgrade

### Benefits:

- Only 1 day for install
- No retraining required
- Reuse old dress programs
- Extend machine's life.

The original control board in the RK Grinder with PMAC-STD is obsolete and repair or spares are rare options. We have come up with an upgrade to the control that provides a new PMAC-Turbo control board that is still being produced. The grinder will operate exactly as before only it will be a little more responsive. The upgrade usually takes less than a day and provides many more years of useful life for your RK centerless grinder.
